

Enabling Net Zero

We acknowledge that achieving our 2050 net zero goal is highly dependent on a range of key enablers, requiring collaboration and action across multiple sectors and stakeholders.

Hydrogen availability

Availability of appropriate volumes of affordable hydrogen from renewable sources.

Technology evolution

Evolution of emerging technologies to viable, commercial scale.

Raw material supply

Availability of quality raw materials.

Renewable energy

Access to affordable, firm renewable energy.

Policy support

Policy that supports decarbonisation investment & avoids carbon leakage.
